Learning Mathematics for Teaching:
Re-Designing "Content Courses" for Teachers

Deborah Loewenberg Ball
Hyman Bass

Overview of Session

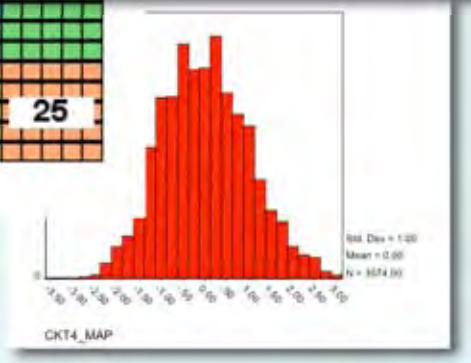

1. Mathematical knowledge for teaching: A theory in progress, and recent developments
2. Developing mathematical knowledge for teaching: Exploring the design and teaching of a course for preservice teachers

Common Framing of the Problem
→ Failure to Solve the Problem

- Teachers do not know mathematics well enough (evidence and causes vary)
- Concentration of under-qualified teachers in urban and high poverty schools

- Increase number and rigor of mathematics requirements for teacher certification
- Recruit mathematically-trained people into teaching

Clarifying the Problem

The quality of mathematics teaching and learning

Teachers' knowledge of mathematics

and their ability to use it in teaching

What mathematical resources do teachers need

in order to teach mathematics to all students effectively?

© 2005 Mathematics Teaching and Learning to Teach
School of Education • University of Michigan • Ann Arbor, MI 48109-1259 • (734) 615-7235 • mtlt@umich.edu

A Practice-Based Approach to Answering the Question

1. **Study instruction**, and identify the mathematical work of teaching
2. Analyze **what mathematical knowledge** is needed to do that work effectively, and **how** it must be understood in order to be useful for the work
3. Test and refine **theory of mathematical knowledge for teaching**
4. Develop, test, and refine **approaches to helping teachers** develop and use mathematical knowledge for teaching

Mathematical Knowledge for Teaching

What do we mean when we use this term, "**mathematical knowledge for teaching**"?

- Mathematical knowledge, skill, habits of mind that are entailed by the work of teaching

What do we mean by the "**work of teaching**"?

- The tasks in which teachers engage, and the responsibilities they have, to teach mathematics, both inside and outside of the classroom

What *is* "Mathematical Knowledge for Teaching"? An Example from Multiplication of Decimals

Multiply:

$$\begin{array}{r} 3.5 \\ \times\ 2.5 \\ \hline \end{array}$$

© 2005 Mathematics Teaching and Learning to Teach
School of Education • University of Michigan • Ann Arbor, MI 48109-1259 • (734) 615-7235 • mtlt@umich.edu

Analyzing Incorrect Answers for $\begin{array}{r} 3.5 \\ \times\ 2.5 \\ \hline \end{array}$

Why do you multiply before you add?

(a)

$$\begin{array}{r} 3.5 \\ \times\ 2.5 \\ \hline 255 \\ 80 \\ \hline 10.55 \end{array}$$

(b)

$$\begin{array}{r} 3.5 \\ \times\ 2.5 \\ \hline 62.5 \end{array}$$

Why do you have as many decimal places in the answer as the total number of decimal places in the problem?

© 2005 Mathematics Teaching and Learning to Teach

Analyzing Correct Answers for $\begin{array}{r} 3.5 \\ \times\ 2.5 \\ \hline \end{array}$

(a)

$$\begin{array}{r} 3.5 \\ \times\ 2.5 \\ \hline .25 \\ 1.5 \\ 1 \\ 6 \\ \hline 8.75 \end{array}$$

(b)

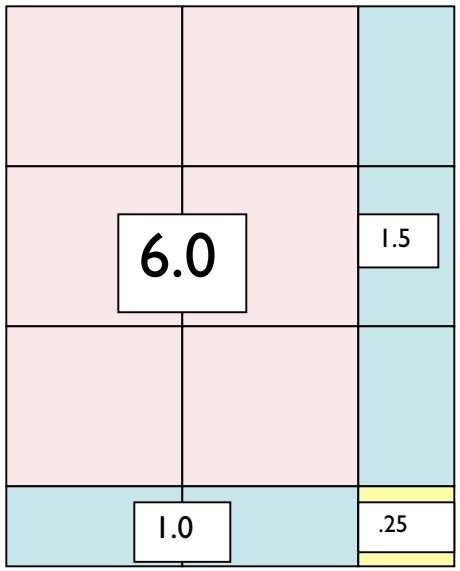

$$\begin{array}{r} 3.5 \\ \times\ 2.5 \\ \hline 1.25 \\ 7.5 \\ \hline 8.75 \end{array}$$

Is there a method?
Does it work for
all decimal numbers?
How do you know?

Developing and Using Valid Measures of Mathematical Knowledge of Teaching

- Interdisciplinary item development
- Piloting and analysis
  - Discriminating ***common content knowledge*** from ***specialized content knowledge***
- Content validity checks
- Cognitive tracing interviews with teachers, laypeople, mathematicians
  - Solving mathematical problems involving specialized content knowledge not always obvious or easy for mathematicians
- Examining videotapes of classroom teaching
- Using teachers' scores to predict student achievement

Linking Teacher Knowledge and Student Achievement: New Results

- Questionnaire consisting of 30 items
- Model: Student Terra Nova gains predicted by:
  - Student descriptors (family SES, absence rate)
  - Teacher characteristics (math methods/content, content knowledge)
- Teacher content knowledge significant
  - Small effect (< 1/10 standard deviation): 2 - 3 weeks of instruction
  - But student SES is also about the same size effect on achievement
    - (Hill,Rowan, and Ball, in press)

Three Kinds of Learning of Mathematics

- Learning mathematics as a student
- Learning mathematics as a teacher
- Learning to teach mathematics

© 2005 Mathematics Teaching and Learning to Teach

Mathematical Content and Applications for the Teaching of Elementary School Mathematics

- A mathematics content course for prospective elementary school teachers
- Focused on **knowing and using mathematics for teaching**
  - ❑ Content
    - Mathematical topic: fractions
    - Mathematical practices: Using representations, using mathematical language, **making and evaluating mathematical explanations**
  - ❑ Applications
    - Using mathematics for tasks of teaching: Interpret and evaluate student work, discuss the mathematics in play in classroom lessons, analyze curriculum materials
- Laboratory for working on the teaching and learning of MKT

Summer 2004 Course Design: Syllabus

- Course focus and goals
- Course requirements
  - Attendance and class participation
  - Notebook
  - Daily assignments
  - Exam
  - Application project
  - Grading
- Course website

Grading and Evaluation: Standards of Professional Performance

The standards of performance are tied to those you will be expected to meet as a teacher:

- meticulous preparation,
- appropriate use of professional knowledge,
- careful consideration of alternatives,
- genuine curiosity about ideas and about learners,
- exercise of professional judgment,
- collegial work on teaching,
- analysis and reflectiveness,
- skills of ongoing professional learning,
- clear expression,
- organization,
- timeliness.

Making and Evaluating Mathematical Explanations

- The forms of expression that mathematically justify and help others understand why a mathematical claim is true
- Purposes and central features of mathematical explanation
- The social nature of explanation
- Providing adequate explanations
- Listening to and appraising others' explanations

Cookie Jar Problem

There was a jar of cookies on the table. Judy was hungry because she hadn't had breakfast, so she ate half the cookies. Then Linda came along and noticed the cookies. She thought they looked good, so she ate a third of what was left in the jar. Peg came by and decided to take a fourth of the remaining cookies with her to her next class. Then Nanette came dashing up and took a cookie to munch on. When Cathy looked at the cookie jar, she saw that there were two cookies left. "How many cookies were there in the jar to begin with?" she asked Judy.

Clip #1: Students' Initial Explanations

1. What do you notice about what the students are doing, about what teacher is doing, and about the content?
2. Is this an explanation? What does it have, or lack?
3. What would you count as an explanation in this situation?

© 2005 Mathematics Teaching and Learning to Teach
School of Education • University of Michigan • Ann Arbor, MI 48109-1259 • (734) 615-7235 • mtlt@umich.edu

Clip #2: Explanations Elaborated

1. What do you notice about what the students are doing, about what teacher is doing, and about the content?
2. Is this an explanation? What does it have, or lack?
3. What would you count as an explanation in this situation?

Pay particular attention to the moves of the teacher.

Clip #3: Launching Explicit Work on Mathematical Explanation

STUDENTS' WORK IN CLASS

- Are you convinced that the only solution to the Cookie Jar Problem is 12? If so, what has convinced you? If not, what is leaving you skeptical?

- Are there things you have noticed that you would call "features of good mathematical explanations"?

Investigating Student Work

- What do the preservice teachers seem to be doing and learning with respect to mathematical explanation? Find specific examples.

Features of "Good" Mathematical Explanations for the Cookie Jar Problem

- Makes clear at the outset what is being explained, and why you start there, and carefully connects the explanation to the question or idea being explained
- Starts from the beginning, and traces the logical flow of the reasoning
- Should be logical and complete, makes conclusion clear and links back to original question or claim or problem
- Might number the steps if appropriate, or label parts of a diagram
- Strives to be as simple and clear as possible
- Defines terms as needed, uses available definitions as needed
- Uses representation(s) accurately (algebraic, geometric, etc.), and combining representations
- Links the language and diagrams clearly to the steps of the argument
- Shows what something means or why is true, and is convincing to the person to whom you are explaining
- Is calibrated to the context (considers the person to whom you are explaining, and what is already established as true and does not need more explanation)

Exam: Question #1

- DIRECTIONS: This question will be completed in pairs. You and your partner will take turns being the presenter and the evaluator. After the presenter completes the explanation, the evaluator will appraise the explanation using the criteria we developed in class, and will provide feedback. Then you will switch roles.

- You are encouraged to prepare your explanations in advance, however you may not use any notes for this question. Although you will only explain one problem, you should do the other as well, so that you are prepared to listen closely to your partner.

- Paper and pens will be available for you to use during your explanation, as will copies of the problems and the list of criteria for good mathematical explanation. You should also refer to our list of criteria for good mathematical explanations, but do not use it rigidly (i.e., you need not comment on every item).

- For this question, you will be assessed on both your ability to provide and to evaluate a mathematical explanation. When you are listening to your partner's explanation, your role is to appraise the quality of the explanation. You should not be coaching your partner, and should listen neutrally so you do not distract or otherwise intervene in your partner's reasoning.

Problems for Explanation Performance Task on Exam

- Amy has 5 yards of beautiful imported embroidered ribbon. For a special project, she decides to cut it equally into 8 strips.
- What fraction of a yard will each strip be?
- What fraction of all of the ribbon will each strip be?

- Chris bought 7 boxes of Girl Scout chocolate mint cookies. He loves cookies. In order to exercise self-control, he decides to eat an equal amount each day, and he wants his cookie supply to last for 20 days.
- What fraction of a box of cookies does he have for lunch each day?
- What fraction of his entire cookie supply does he eat each day?

Please do not circulate or cite without permission

Conclusion: Questions and Challenges

- Tackling issues of coverage
  - Choosing and justifying mathematical content (topics and practices) for **in-depth work**
  - Choosing and justifying content for **brief treatment**
  - Choosing and justifying content **to omit**
- Understanding and developing mathematical fluency for teaching
- Developing tasks and pedagogy appropriate for MKT: Do we really think that our courses/workshops should be taught as teachers would teach their own students?
- Developing performance assessments: knowing and using mathematics (e.g., explaining, representing)
- Rethinking the intersection of content and methods
- The professional development of professional developers
