An urgent problem, and a new risk

1. Enormous gaps in learning opportunities and disparities in achievement (within U.S. and in international comparisons)
2. Rapidly changing school population
3. Higher, more complex academic goals
4. High expectations for <u>all</u> students

© 2009 Mathematics Teaching and Learning to Teach

Strands of mathematical proficiency

- ***Conceptual understanding*** - comprehension of mathematical concepts, operations, and relations
- ***Procedural fluency*** - skill in carrying out procedures flexibly, accurately, efficiently, and appropriately
- ***Strategic competence*** - ability to formulate, represent, and solve mathematical problems
- ***Adaptive reasoning*** - capacity for logical thought, reflection, explanation, and justification
- ***Productive disposition*** - habitual inclination to see mathematics as sensible, useful, and worthwhile, coupled with a belief in diligence and one's own efficacy

The practice of teaching[1]

- Ubiquitous "natural" learning versus deliberately guided learning
- Distinguishing between "natural" and "professional" teaching; professional teaching is not a natural proficiency.
- Professional teaching is deliberate practice aimed at specific learning.
- Pervasive evidence that professional teachers have significant effects on student learning.

[1]David Cohen, *Teaching Practice and Its Predicaments*, to appear in 2010, Harvard University Press)

What makes teaching professionally specialized work?

1. Knowing content for teaching
2. Being able to hear and see content from others' perspectives, and to learn and know students
3. Using high-leverage practices to enable students to succeed with the content

© 2009 Mathematics Teaching and Learning to Teach
School of Education • University of Michigan • Ann Arbor, MI 48109-1259 • (734) 615-7235 • mtlt@umich.edu

Overview of tonight's session

1. Exploring what it means to say that teaching is professionally specialized work
2. Investigating specific high leverage practices of mathematics teaching
3. Developing professional skill as teachers: How can we keep improving our special expertise to be able reach all our students?

© 2009 Mathematics Teaching and Learning to Teach
School of Education • University of Michigan • Ann Arbor, MI 48109-1259 • (734) 615-7235 • mtlt@umich.edu

What practices of teaching do you see?

1. Selecting/designing tasks
2. Identifying and working toward the mathematical goal of the lesson
3. Listening to and interpreting students' responses
4. Teaching students what counts as "mathematics" and mathematical practice
5. Making error a fruitful site for mathematical work
6. Attending to ambiguity of language ("big rectangle")
7. Deciding what to clarify, what to make more precise, what to leave in student's own language

© 2009 Mathematics Teaching and Learning to Teach

What characterizes "high leverage" practices?

- Central to building bridges between students and content
- Crucial to improve the learning and achievement of all students
- Address inequities that can arise based on diversity of opportunity and experience
- Highly useful and used frequently in teaching
- Not natural to do; improve upon normal help

(Ball, Sleep, Boerst, & Bass, 2009; Grossman & McDonald, 2008; Grossman, Compton, Igra, Ronfeldt, & Shahan, 2009; Lampert & Graziani, 2009)

Please do not circulate or cite without permission

Examples of high-leverage practices

- Choosing and using mathematical tasks
- Using representations skillfully, mapping clearly across contexts
- Choosing examples (Rowland)
- Using the whiteboard carefully across a lesson and a discussion (Yoshida, Takahashi, Suzuka & Boerst)
- Using student error
- Broadening what it means to be "good at math" in school (Boaler, Cohen, Lotan)
- Attending to issues of mathematical language (Schleppegrell)
- Teaching to the mathematical point (Sleep)
- Designing and getting students to do useful homework, with attention to issues of equity
- Building and maintaining a mathematical and intellectually serious culture

© 2009 Mathematics Teaching and Learning to Teach

Enacting high expectations in mathematics instruction

1. Broaden what it means to be successful in math class
2. Make mathematical practices explicit
3. Support students' mathematical work both publicly and privately
   - Listen carefully to students' talk
   - Notice and improve ambiguous talk
   - Ask mathematical questions
4. Teaching students to be "people who study mathematics"

© 2009 Mathematics Teaching and Learning to Teach
School of Education • University of Michigan • Ann Arbor, MI 48109-1259 • (734) 615-7235 • mtlt@umich.edu

Choosing mathematical tasks

Use the numbers 9, 1, and 2 once on each line to make 6 different numbers. The first one is done for you:

1 9 2

_ _ _

_ _ _

_ _ _

_ _ _

_ _ _

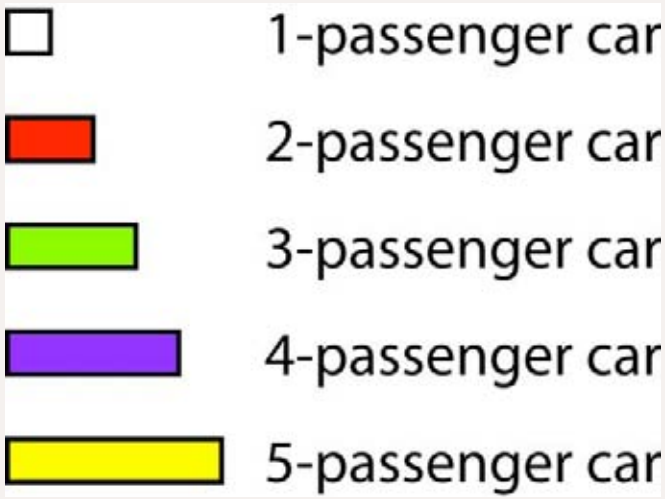

Today's date is **9/12.**

- How many three-digit numbers can you make using 9, 1, and 2?
- How can you be sure that you have all the possibilities?

What are the key similarities and differences between these two tasks?

© 2009 Mathematics Teaching and Learning to Teach

The Train Problem

A special Customer wants to order a special five-car train that uses one of each of the different-sized cars. She wants to be able to break apart her 5-car train to form smaller trains that hold exactly 1 to 15 people. In addition, she wants to be able to form these smaller trains using cars that are next to each other in the larger train.

Can the Train Company fill the Customer's order? Explain how you know.

A provocation

- The professional plateau: Studies show that there is little gain in teachers' capacity to help students learn after the fourth year
- What is your explanation of this?
  1. Maybe teachers hit the pinnacle of professional practice quickly
  2. Maybe the differences between beginning and accomplished teachers is more subtle than these measures
  3. Premature leveling off: Lack of a system of professional support to help teachers develop

Learning in and from practice[1]

1. Studying content and doing mathematics as a teacher
2. Studying curriculum and specific tasks
3. Studying student work
4. Creating and examining one's own and others' records of practice, e.g.:
   - Videotape of classroom discussions
   - Photographs of the whiteboard and other public records of class mathematical work

[1]Ball & Cohen (1999), *Developing practice, developing practitioners.*

© 2009 Mathematics Teaching and Learning to Teach

1. Learning math as a teacher

Doing mathematical work of teaching:

1. Construct a definition of "even number" that is mathematically correct and usable/comprehensible by upper elementary students.
2. Examine definitions of "even number" from different textbooks; determine which are mathematically correct and usable; fix ones that are not.

© 2009 Mathematics Teaching and Learning to Teach
School of Education • University of Michigan • Ann Arbor, MI 48109-1259 • (734) 615-7235 • mtlt@umich.edu
Please do not circulate or cite without permission

Do these correctly define "even number"?

1. A number that can be divided in two equal parts with nothing left over is even.
2. A whole number is even if it can be divided into groups of 2 with nothing left over.
3. A number with 0, 2, 4, 6, or 8 in the ones place is even.

Is 7 even?

Is 32.7 even?

© 2009 Mathematics Teaching and Learning to Teach
School of Education • University of Michigan • Ann Arbor, MI 48109-1259 • (734) 615-7235 • mtlt@umich.edu
Please do not circulate or cite without permission

2. Studying curriculum and specific tasks

- Comparing fractions on the number line
- Select a set of 5 numbers for pupils to place on the line and explain why you chose that set of numbers. What will each provide in terms of opportunity to learn?

© 2009 Mathematics Teaching and Learning to Teach
School of Education • University of Michigan • Ann Arbor, MI 48109-1259 • (734) 615-7235 • mtlt@umich.edu
Please do not circulate or cite without permission

Choosing examples

Which of the following is best for setting up a discussion about different solution paths for simplifying radical expressions?

(a) $\sqrt{54}$

(b) $\sqrt{156}$

(c) $\sqrt{128}$

© 2009 Mathematics Teaching and Learning to Teach

Please do not circulate or cite without permission

3. Studying student work

1

$$\begin{array}{r} 35 \\ \times\ 25 \\ \hline 175 \\ 70 \\ \hline 245 \end{array}$$

2

$$\begin{array}{r} {\scriptstyle 1\ \ \ } \\ {\scriptstyle 2\ } 35 \\ \times\ 25 \\ \hline 255 \\ 80 \\ \hline 1055 \end{array}$$

3

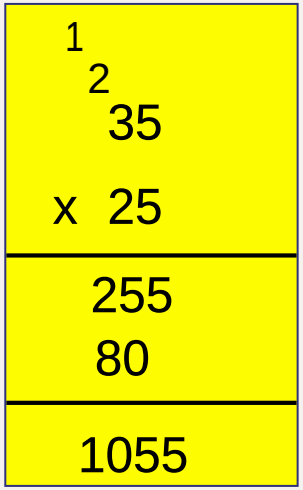

$$\begin{array}{r} 35 \\ \times\ 25 \\ \hline 625 \\ 85 \\ 105 \\ 60025 \end{array}$$

- What is the error?
- What produces this error, and what does that show about the student's understanding?

© 2009 Mathematics Teaching and Learning to Teach
School of Education • University of Michigan • Ann Arbor, MI 48109-1259 • (734) 615-7235 • mtlt@umich.edu
Please do not circulate or cite without permission

Taking next steps

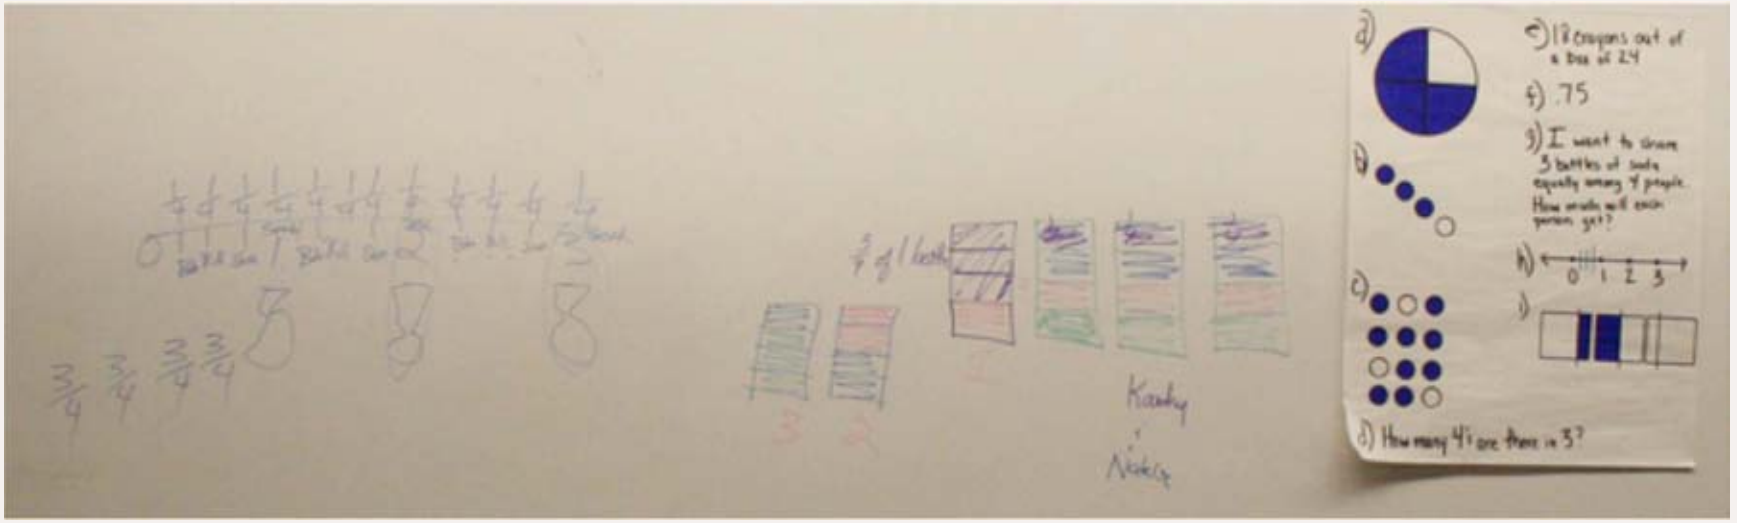

Consider this error:

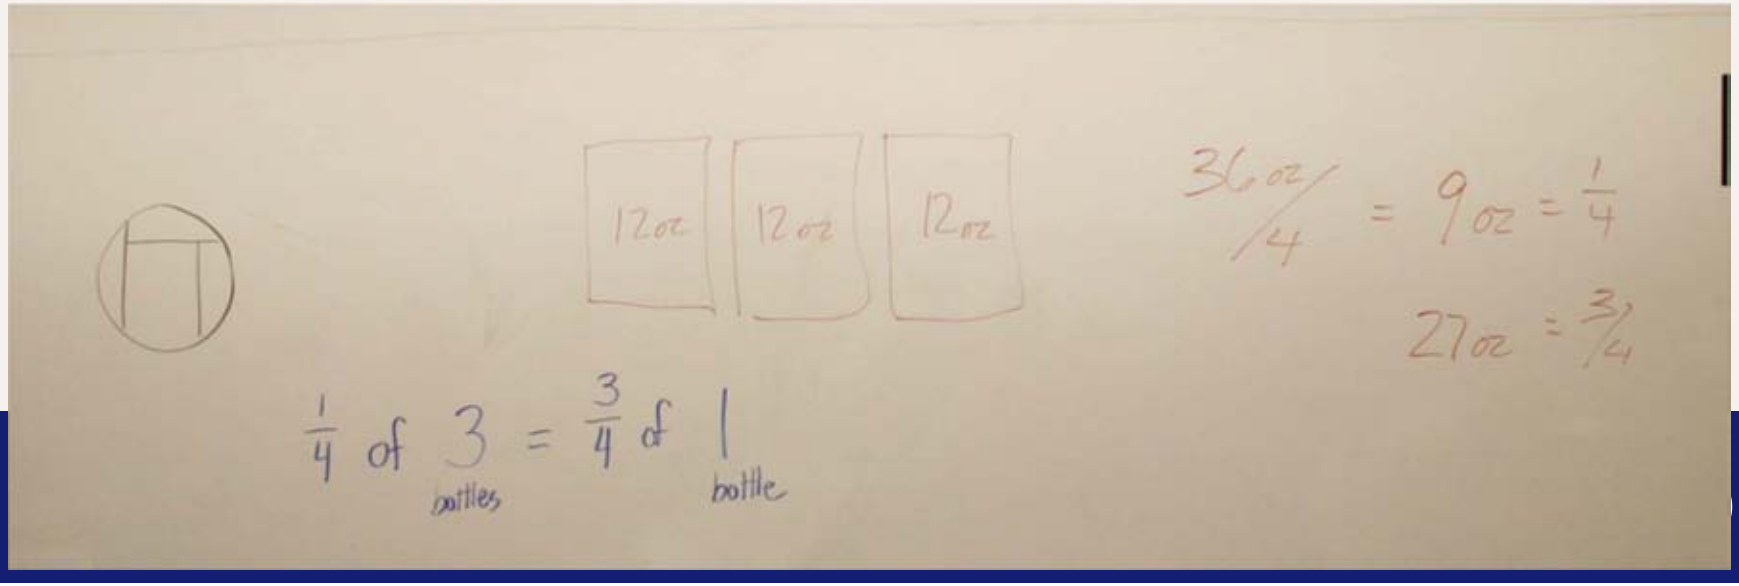

- What are three different things that might have led to this error? What could you do to find out?
- What would you do to help learners understand the mistake, and what would you try to remedy it?

Challenges of learning in and from practice

1. Lack of an adequate knowledge base about teaching practice
   - Inadequate language (in English)
   - Difficulty parsing the work into basic elements
2. Problem of expertise and tacit knowledge
3. Widely held view of teaching as uncertain, artistic, and unable to be specified
   - Resistance to seeing teaching as high-precision work, requiring high levels of skill
   - View of detail as "prescriptive" and as de-skilling professional work
4. Lack of people prepared to teach practice
   - Unspecified professional group, with no preparation for the work
5. No common K-12 curriculum in the U.S. and lack of agreement about what to make core

In celebration of professional teaching

- We urgently need to improve all students' opportunities and learning.
- This requires skillful professional teaching.
- Teaching is intricate work, and not natural, and needs to be learned and, hence, studied and continuously improved.
- Seeing teaching as skilled, high-precision work, that is not a matter of personal style and preference, is to acknowledge its professional nature, not to repudiate its "creativity."
