SUPPORTING THE HIGH QUALITY TEACHING OF MATHEMATICS:

BALANCING THE EQUATION

TODAY'S SESSION

1. What does does it mean to be mathematically skillful?
2. Skillful mathematics teaching: A balancing act
3. What are high-leverage teaching practices?
4. High-leverage practices for teaching students to be mathematically skillful

EDUCATION

THE 8s PROBLEM

Write as many 8s as you like. Insert plus signs (+) so that the value of the expression is equal to 1000.

Note: You can string 8s together, such as 888.

- How many different equations can you write following this rule?
- What is your approach?
- Can you find all of them? How do you know?

EDUCATION

SOLUTIONS TO THE 8s PROBLEM

Number of 888s	Number of 88s	Number of 8s	Number of terms
0	0	125	125
1	0	14	15
0	1	114	115
1	1	3	5
	2	103	105
	3	92	95
	4	81	85
	5	70	75
	6	59	65
	7	48	55
	8	37	45
	9	26	35
	10	15	25
	11	4	15

STRANDS OF MATHEMATICAL PROFICIENCY

- ***Conceptual understanding*** - comprehension of mathematical concepts, operations, and relations
- ***Procedural fluency*** - skill in carrying out procedures flexibly, accurately, efficiently, and appropriately
- ***Strategic competence*** - ability to formulate, represent, and solve mathematical problems
- ***Adaptive reasoning*** - capacity for logical thought, reflection, explanation, and justification
- ***Productive disposition*** - habitual inclination to see mathematics as sensible, useful, and worthwhile, coupled with a belief in diligence and one's own efficacy

THE COMMON CORE:
WHAT IS ENTAILED IN BEING MATHEMATICALLY SKILLFUL?

CONCEPTS AND PROCEDURES	MATHEMATICAL PRACTICES
▪ Understanding of operations (+, x) ▪ Fluency with whole number computational skills (+, x) ▪ Multi-digit computation ▪ Understanding of mathematical structure	▪ Making sense of and interpreting problems ▪ Representing mathematical ideas in strategic ways ▪ Persevering with complex mathematical problems ▪ Constructing mathematical arguments ▪ Looking for and using regularity in mathematical reasoning ▪ Looking for and making use of mathematical structure

WHAT DOES IT MEAN TO TEACH FOR MATHEMATICAL SKILLFULNESS?

- Set goals that combine strands of proficiency and that wrap the mathematical practices together with the mathematical "content"
- Develop students' learning opportunities through:
  - the careful choice of mathematical tasks
  - the way that a mathematical task is framed and set up
  - how the mathematical task is used

TEACHING AS A COMPLEX BALANCING ACT

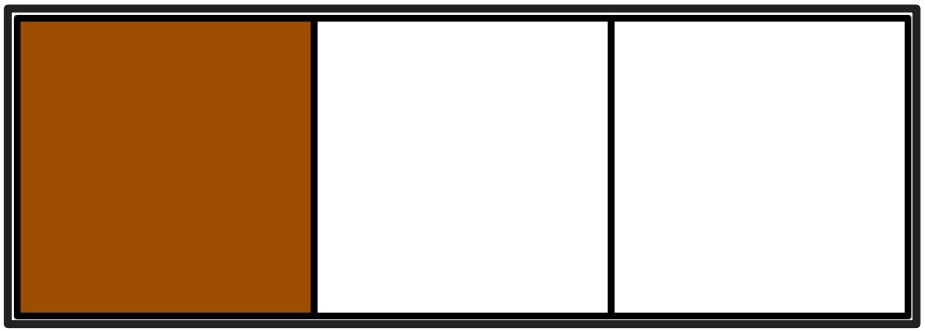

Teaching all students to become mathematically skillful entails balancing three traditional dualities:

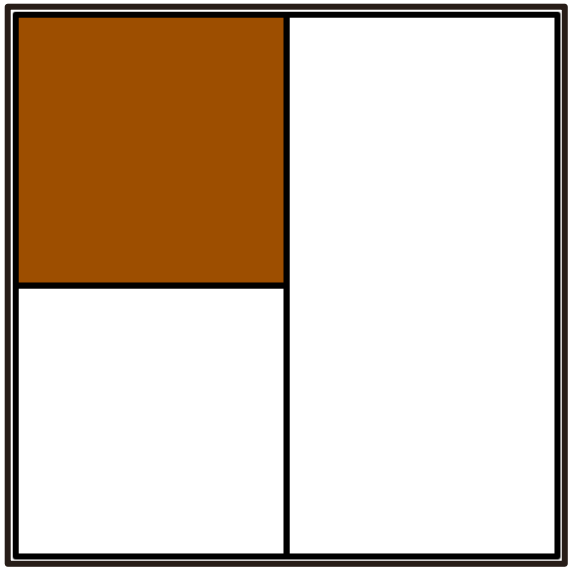

1. Focus on mathematical concepts and procedures AND mathematical practices
2. Teach in ways that are both teacher-directed AND student-centered
3. Work to fill students' gaps AND to accelerate their capabilities with complex mathematical work

HIGH-LEVERAGE INSTRUCTIONAL PRACTICES

High-leverage practices (HLPs) are instructional tasks and activities that powerfully promote learning and are fundamental to skillful teaching.

Based on work done at the University of Michigan School of Education in the redesign of our teacher education program, and at TeachingWorks, an organization housed at U-M whose mission it is to improve the quality of teaching and learning by transforming teachers' education.

FIVE HIGH-LEVERAGE TEACHING PRACTICES TO DEVELOP STUDENTS' SKILLFULNESS

1. Establish norms and routines for mathematical work
2. Elicit students' mathematical thinking
3. Respond to common patterns of students' mathematical thinking
4. Modify mathematics tasks
5. Lead group discussions about mathematics

This work is licensed under the Creative Commons Attribution-Noncommercial-No Derivative Works Version 3.0 United States License: http://creativecommons.org/licenses/by-nc-nd/3.0/us/

© 2013 Mathematics Teaching and Learning to Teach • School of Education • University of Michigan • Ann Arbor, MI 48109 • mtlt@umich.edu

NORMS AND ROUTINES FOR PRODUCTIVE MATHEMATICAL WORK

1. Teaching students to listen to and respond to others with interest and respect
2. Holding students accountable for reasoning
3. Using multiple calling on strategies, according to purpose
4. Explicitly supporting students to present at the board: audibly, clearly
5. Modeling and supporting the recording of one's own and others' mathematical ideas and reasoning
6. Encouraging writing, representing, drawing mathematical ideas
7. Analyzing errors as part of productive mathematical work

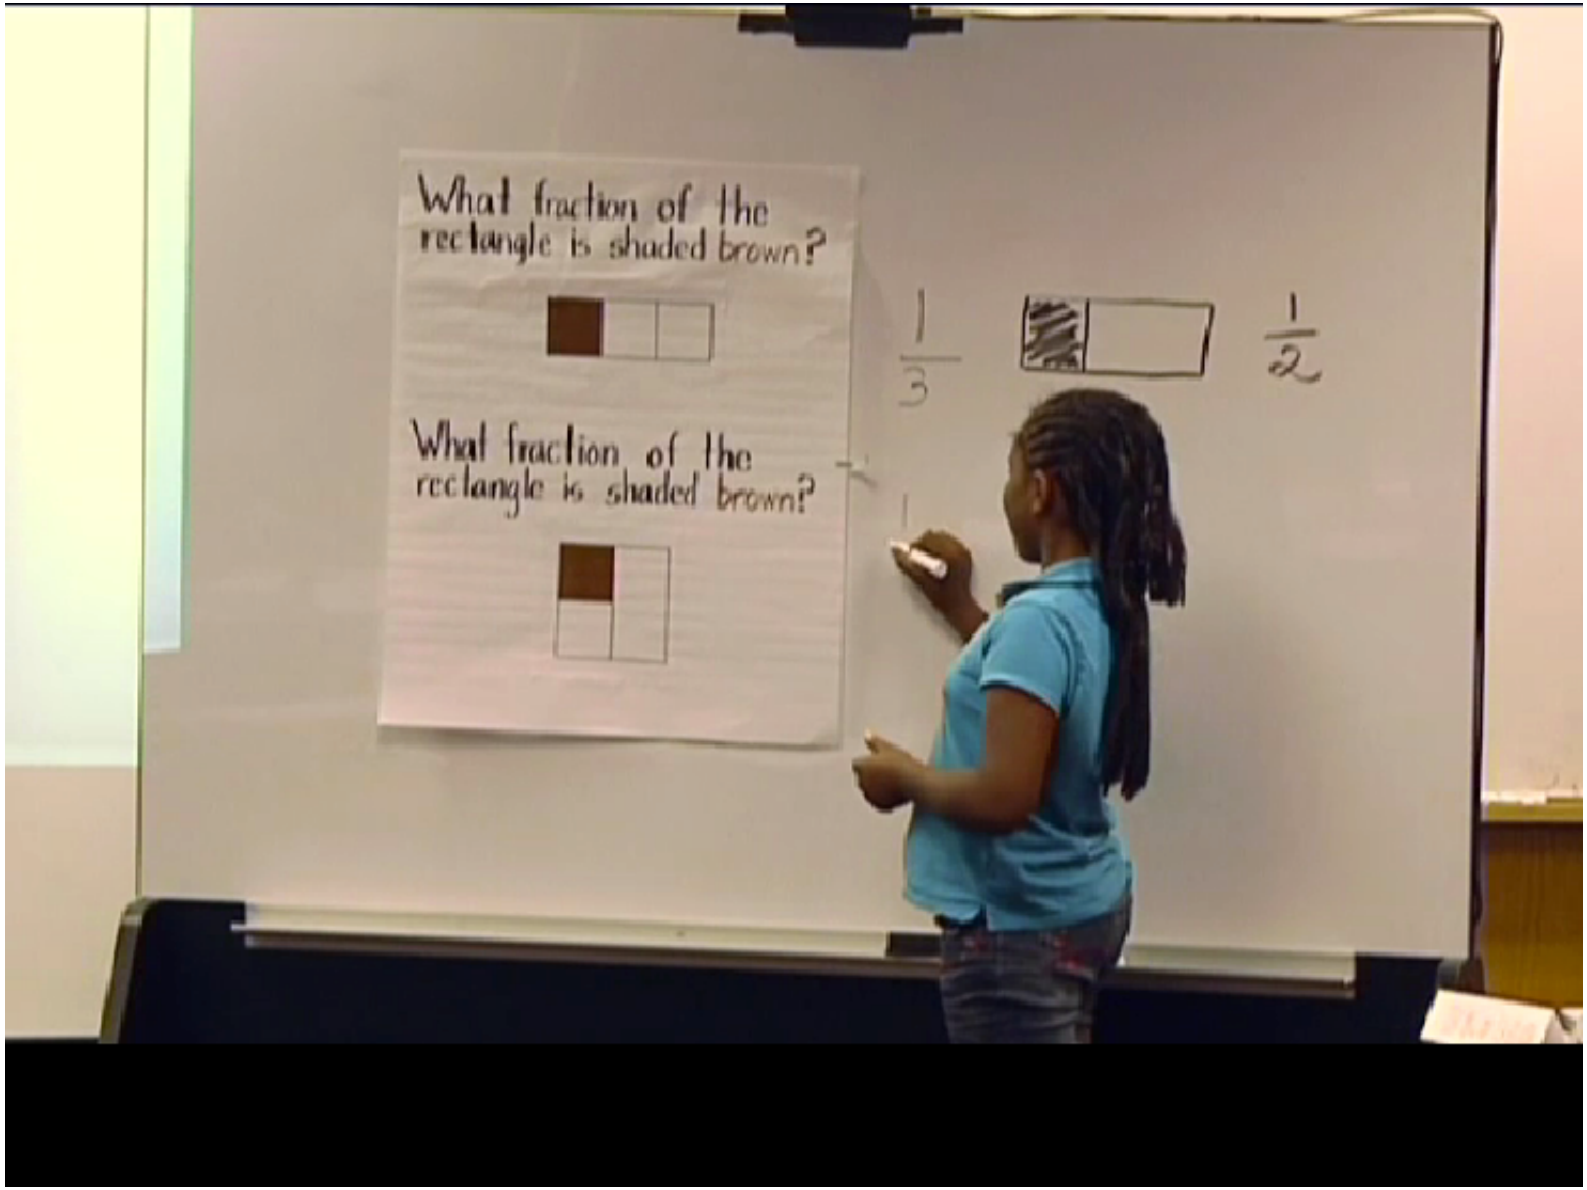

EDUCATION

© 2013 Mathematics Teaching and Learning to Teach • School of Education • University of Michigan • Ann Arbor, MI 48109 • mtlt@umich.edu

NOTICE "SAFE" TASKS

What makes these tasks "safe"?

1. Much of the thinking is done for the children (e.g., equal partitioning; shading; labeling)
2. Protect from error — supports getting "correct" answer

THUS, THESE TASKS ARE ACTUALLY POTENTIALLY UNSAFE.

EDUCATION

BY-NC-ND
This work is licensed under the Creative Commons Attribution-Noncommercial-No Derivative Works Version 3.0 United States License: http://creativecommons.org/licenses/by-nc-nd/3.0/us/
© 2013 Mathematics Teaching and Learning to Teach • School of Education • University of Michigan • Ann Arbor, MI 48109 • mtlt@umich.edu

ANOTHER "SAFE TASK"

Write number sentences for 10:

___ + ___ =	___ + ___ =
___ + ___ =	___ + ___ =
___ + ___ =	___ + ___ =
___ + ___ =	___ + ___ =
___ + ___ =	___ + ___ =
___ + ___ =	

EDUCATION

© 2013 Mathematics Teaching and Learning to Teach • School of Education • University of Michigan • Ann Arbor, MI 48109 • mtlt@umich.edu

ALTERNATIVE MORE CHALLENGING TASK

Write equations for 10.

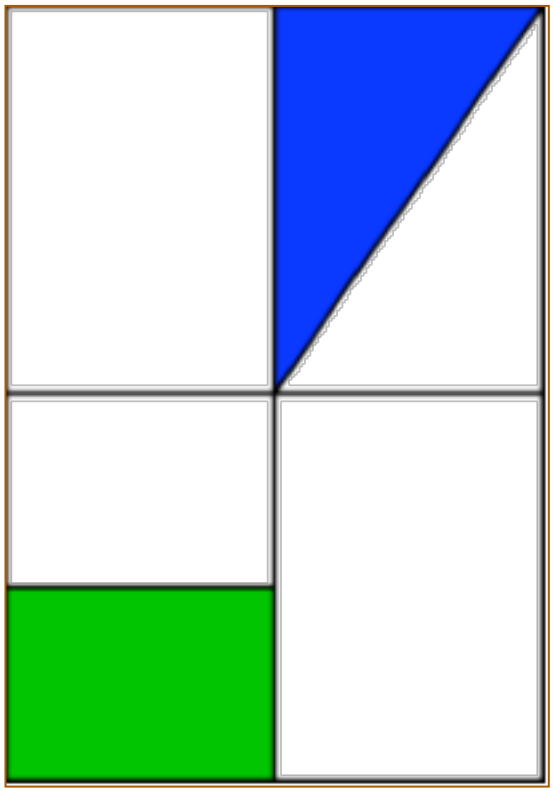

How many different equations are there for 10?

What are the features of this task compared with the "safe" version?

EDUCATION

This work is licensed under the Creative Commons Attribution-Noncommercial-No Derivative Works Version 3.0 United States License: http://creativecommons.org/licenses/by-nc-nd/3.0/us/
© 2013 Mathematics Teaching and Learning to Teach • School of Education • University of Michigan • Ann Arbor, MI 48109 • mtlt@umich.edu

BUILD TASKS THAT SUPPORT STUDENTS DOING MATHEMATICAL WORK

What fraction of the big rectangle is shaded blue?

What fraction of the big rectangle is shaded green?

What fraction of the big rectangle is shaded altogether?

EDUCATION

This work is licensed under the Creative Commons Attribution-Noncommercial-No Derivative Works Version 3.0 United States License: http://creativecommons.org/licenses/by-nc-nd/3.0/us/

ATTEND CLOSELY TO WORDING

POSSIBLE PROBLEM:

I have pennies, nickels, and dimes in my pocket. If I pull out two coins, what amounts of money might I have?

EDUCATION

BY-NC-ND
This work is licensed under the Creative Commons Attribution-Noncommercial-No Derivative Works Version 3.0 United States License: http://creativecommons.org/licenses/by-nc-nd/3.0/us/
© 2013 Mathematics Teaching and Learning to Teach • School of Education • University of Michigan • Ann Arbor, MI 48109 • mtlt@umich.edu

CONSIDER WITH CARE ALTERNATIVE WORDING

1. I have pennies, nickels, and dimes in my pocket. If I pull out two coins, what amount of money might I have?
2. I have pennies, nickels, and dimes in my pocket. If I pull out two coins, how many combinations are possible?
3. I have pennies, nickels, and dimes in my pocket. If I pull out two coins, how many different amounts of money are possible? Prove that you have found all the amounts that are possible.

What are the differences among these three formulations?

TEACHING STUDENTS TO BE SUCCESSFUL WITH COMPLEX TASKS

- Help students to believe they can do hard work
- Scaffold complex work appropriately
- Make wise judgments about what to leave open and what to make explicit
- Comment on mathematics, and mathematical productions, not features of students
- Support error as a fruitful site for mathematical work, and teach students to use error productively

EDUCATION

BY-NC-ND
This work is licensed under the Creative Commons Attribution-Noncommercial-No Derivative Works Version 3.0 United States License: http://creativecommons.org/licenses/by-nc-nd/3.0/us/

⑤ Lead group discussions about mathematics

EDUCATION

BY-NC-ND
This work is licensed under the Creative Commons Attribution-Noncommercial-No Derivative Works Version 3.0 United States License: http://creativecommons.org/licenses/by-nc-nd/3.0/us/
© 2013 Mathematics Teaching and Learning to Teach • School of Education • University of Michigan • Ann Arbor, MI 48109 • mtlt@umich.edu

THREE TYPES OF MATH DISCUSSIONS

1. Practicing
2. Learning concepts or procedures together
3. Discussing solutions to a problem

EDUCATION

This work is licensed under the Creative Commons Attribution-Noncommercial-No Derivative Works Version 3.0 United States License: http://creativecommons.org/licenses/by-nc-nd/3.0/us/
© 2013 Mathematics Teaching and Learning to Teach • School of Education • University of Michigan • Ann Arbor, MI 48109 • mtlt@umich.edu

PARTS OF A DISCUSSION

1. Setting up the problem**
2. Monitoring student work
3. Launching the discussion
4. Orchestrating**
5. Concluding

EDUCATION

SETTING UP THE PROBLEM

EDUCATION

This work is licensed under the Creative Commons Attribution-Noncommercial-No Derivative Works Version 3.0 United States License: http://creativecommons.org/licenses/by-nc-nd/3.0/us/
© 2013 Mathematics Teaching and Learning to Teach • School of Education • University of Michigan • Ann Arbor, MI 48109 • mtlt@umich.edu

VIEWING FOCUS

1. What are the purposes of the discussion?
2. What is the teacher doing to lead the discussion?
3. What roles are students playing?

EDUCATION

This work is licensed under the Creative Commons Attribution-Noncommercial-No Derivative Works Version 3.0 United States License: http://creativecommons.org/licenses/by-nc-nd/3.0/us/

ORCHESTRATING THE DISCUSSION

EDUCATION

This work is licensed under the Creative Commons Attribution-Noncommercial-No Derivative Works Version 3.0 United States License: http://creativecommons.org/licenses/by-nc-nd/3.0/us/
© 2013 Mathematics Teaching and Learning to Teach • School of Education • University of Michigan • Ann Arbor, MI 48109 • mtlt@umich.edu

CONCLUSIONS

1. Teaching all students to be mathematically skillful requires teaching that is skillful.
2. Skillful teaching involves balancing traditional dualisms about content vs. process, teacher-direction vs. student-centeredness, and remediation vs. enrichment.
3. Supporting teachers to develop skill with high-leverage teaching practices is key to the development of students' mathematical skillfulness.
