THE UNIVERSITY OF MICHIGAN School of Public Policy and Department of Economics

BENEFIT-COST ANALYSIS

Subject of the Course:

The aim of this course is to teach you how to do benefit-cost analysis. On one level, this is pretty simple: just sum all the benefits of a program, subtract all the costs, and there you are. If net benefits are positive, the program is a winner; if not, not. In choosing among programmatic options, take the one with the highest level of net benefits.

But obviously there are complications. First, it is not always easy to measure benefits and costs -- you have to know some economics and perhaps even some philosophy. Second, benefits and costs can occur at different times, and you have to adjust for that problem. Third, benefits and costs are received and borne by different people, and both the economics and the politics of dealing with distributional issues can get tricky. Fourth, there are many different types of programs for which an aspiring public servant might want to do a benefit-cost analysis. This list goes on, and it will easily fill a semester for us to cover it adequately.

Prerequisite:

SPP/Econ 555 or equivalent courses in microeconomics

Organization:

The course meets twice a week, Mondays and Wednesdays, 8:30-10, in room 1309 SEB. The TA, Tom Kornfield, and I will also hold regular office hours:

Deardorff 458 Lorch Mondays, 2:30 - 3:30 PM

Wednesdays, 10:30 - 11:30 AM

Kornfield 365 Lorch Wednesdays, 4:30 - 6:00 PM

Fridays, 1:00 - 3:00 PM

Also, feel free to call us or e-mail us for an appointment. We may be reached as follows:

Deardorff 764-6817 alandear@umich.edu

Kornfield 662-1605 kornfiel@umich.edu

Group ben.cost97@umich.edu

(Includes all students in the course plus Kornfield and Deardorff)

SPP/ECON 573 Alan Deardorff Fall Term 1997 Course Syllabus

Home Page:

Whenever possible, materials for the course will be posted on the course home page:

http://www.econ.lsa.umich.edu/~alandear/courses/573/573.html

Requirements:

Requirements for the course consist of a series of problem sets, a "case exercise," two inclass mid-term exams, and a term paper. There is no final exam.

The most important requirement for the course is the **term paper**, in which you will do a benefit-cost analysis on a topic of your choice. This will be done in two parts: a one page outline or prospectus due October 1, and the paper itself of 10-15 pages due on the last day of class, December 10. The paper topic must be approved by me, so come and talk to me about your paper ideas as early in the semester as possible. The paper may be done in groups, limited to 3 persons maximum, but you should be warned that grading will be slightly tougher in this case. A group will turn in only a single paper, jointly written, and the same grade will be given to all members of the group.

The **prospectus**, by the way, is not an irrevocable commitment. If you later decide to change what you do in a significant way, or even disband your group and work separately, you are welcome to, but only if you first clear the change with me in writing (which includes e-mail). I won't object, except if I think you are getting yourself into trouble.

The **case exercise** will be like an elaborate problem set, but with only one large problem, applying benefit-cost to some hypothetical situation that will be spelled out in some detail. My plan is to hand it out on Monday, Oct. 27, and have it due 48 hours later, at the beginning of class that Wednesday, Oct. 29. If you see problems with that timing, please let me know immediately.

For the case exercise, you will definitely work in groups, of two or perhaps three, that I will assign. That is, you don't get to pick your partners for this assignment. I will make the assignments by mid-October, so that you and your partner(s) will have time to think about how you will coordinate. As with the term papers, you will turn in only a single document for your group, and you will share the same grade.

Problem sets will be handed out a week before they are due, and should be done individually. You may discuss them with other members of the class, but the work you hand in should be your own. It is important that you show clearly *how* you get your answers, and not just the answers themselves, and they will be graded accordingly. Problems (and exams) will use tools that may have been presented only in class, as well as tools from your previous course in microeconomics, so do not count on the textbook and other readings to tell you all you need to do them well.

The two **exams** will be in class, closed-book. You should bring a calculator, although it will not be needed for most of the questions.

SPP/ECON 573 Alan Deardorff Fall Term 1997 Course Syllabus

Schedule and Weights:

The schedule for the requirements and their contributions to your final grade are as follows:

Problem sets (20%)		
#1	Sep. 17	4%
#2	Sep. 24	4%
#3	Oct. 8	4%
#4	Oct. 22	4%
#5	Nov. 12	4%
Case Exercise	Oct. 29	20%
Midterm exam #1	Oct. 1	10%
Midterm exam #2	Nov. 19	15%
Term paper (30%)		
Prospectus	Oct. 1	5%
Paper	Dec. 10	30%

All of the problems sets, as well as the case exercise, the prospectus and term paper are due at the <u>beginning</u> of class on the stated day. Late assignments will be penalized by one-third of a letter grade per 24 hour period beyond the deadline.

Text:

The textbook for the course is *A Guide to Benefit-Cost Analysis*, 2nd edition, by Edward M. Gramlich, Prentice Hall, 1990. It is available from the usual bookstores around campus. A coursepack containing the supplementary required readings will be available at Dollar Bill Copying, 611 Church St.

COURSE OUTLINE AND READING LIST

<u>Note</u>: The intention is to complete through I-C by mid-October, for use on the Case Exercise, and to complete through II-A by mid-November for the second exam. The remaining topics will be addressed only as time permits, during the last month of the class while you are working on your papers. I would especially like to have a series of student presentations during the final classes of the term and will be asking for volunteers in late September. These presentations could be on any of the topics and readings listed in the remainder of the syllabus, or they could be on the application and/or relevance of benefit-cost analysis to a policy area of your own interest and expertise. In either case, I would hope for 20-30 minute presentations followed by discussion.

I. Principles of Valuation

A. Introduction

Gramlich, Ch. 1, 2, 3

B. Partial Equilibrium

Gramlich, Ch. 4
