Reference Letter for Steven B. Damelin

Dr. Steven B. Damelin earned his doctorate from the University of Witwatersrand. His research interests are wide-ranging and include approximation theory, singular integrals, optimization, harmonic analysis, numerical quadrature, orthogonal and extremal polynomials, computer vision, signal processing, manifold learning, clustering, and probability. He has authored or co-authored over 60 research publications and is a co-author of two mathematics books.

Between August 2013 until March 2019, Dr. Damelin was an associate editor at Mathematical Reviews. This is the division of the American Mathematical Society responsible for producing MathSciNet, a database of the published mathematical sciences literature. We hire several PhD mathematicians to oversee the curation of the content of this database, which is relied on by research mathematicians world-wide.

During his tenure with AMS, Dr. Damelin was an engaged member of our staff. He demonstrated a dedication to expanding MR's coverage in interdisciplinary areas, recruitment of reviewers, and advancing the strategic plan of AMS. In addition to his editing work for MR, Dr. Damelin continued to write and publish papers and engage in mathematical research to maintain an active presence in the mathematical community.

We wish Dr. Damelin the best in his future endeavors.
