

PREDICTING THE FUTURE IN SCIENCE, ECONOMICS, AND POLITICS

**Frank Whelon Wayman, Paul R. Williamson, Solomon Polachek,
and Bruce Bueno de Mesquita, Eds.**

CONTENTS:

Preface and Introduction: Overview of Why this Book Matters, page 8

PART I. THE PROMISE OF GLOBAL FORECASTING

1. Scientific Prediction and the Human Condition — Frank W. Wayman (page 10).
2. Organizing diverse contributions to global forecasting — Paul R. Williamson (page 23).

PART II. HUMAN NATURE AND PREDICTION

Editors' Introduction to Part II (page 45)

3. Consilience: the Role of Human Nature in the Emergence of Social Artifacts — Edward O. Wilson (page 50).
4. Darwin's challenges and the future of human society — Richard Alexander (page 67).

PART III. THE VALUE OF THE FUTURE

Editors' Introduction to Part III (page 152)

5. Properly Discounting the Future: Using Predictions in an Uncertain World — — —
J. Doyne Farmer and John Geanakoplos (page 155).
6. Long-Term Policy Problems: Definition, Origins, and Responses — Detlef Sprinz
(page 173).
7. Explaining and Predicting Future Environmental Scarcities and Conflict — Urs
Luterbacher, Dominic Rohner, and Ellen Wiegandt (page 203).

PART IV. SOME PROBLEMS ADDRESSED VIA MODELING

Editors' Introduction to Part IV, page 280

8. Forecasting nuclear weapons proliferation: a hazard model — Atsushi Tago and J.
David Singer (page 282).
9. Forecasting Political Developments with the Help of Financial Markets — Gerald
Schneider (page 306).

PART V. THE GLOBAL SYSTEM AND THE POSSIBILITIES OF PREDICTION

Editors' Introduction to Part V, page 333

10. Glimpses of the Future — John Holland (page 338).

11. Forecasting the Evolution of Cultural Collisions Using Annealing-Nucleation Models
— Myron S. Karasik (page 371).
12. Power Structure Fluctuations in the "Longue Durée" of the World System — David
Wilkinson (page 435).
13. From Altruism to the Future Frequency of War: How Consilient Explanation Differs
from Prediction — Frank W. Wayman (page 459).
14. System Change and Richardson Processes: Application of Social Field Theory —
Paul R. Williamson (page 532).
15. Computational Dynamic Modeling of the Global State Space — Paul R. Williamson
(page 602).

PART VI. NEW APPROACHES

16. Scientific Revolutions and the Advancement of Explanation and Prediction — Frank
W. Wayman, (page 651).
17. Innovations in Forecasting the Future that One Can Learn from *Prediction* —
Solomon W. Polachek, (page 705).

18. Predicting the Future to Shape the Future — Bruce Bueno de Mesquita, (page 730).
